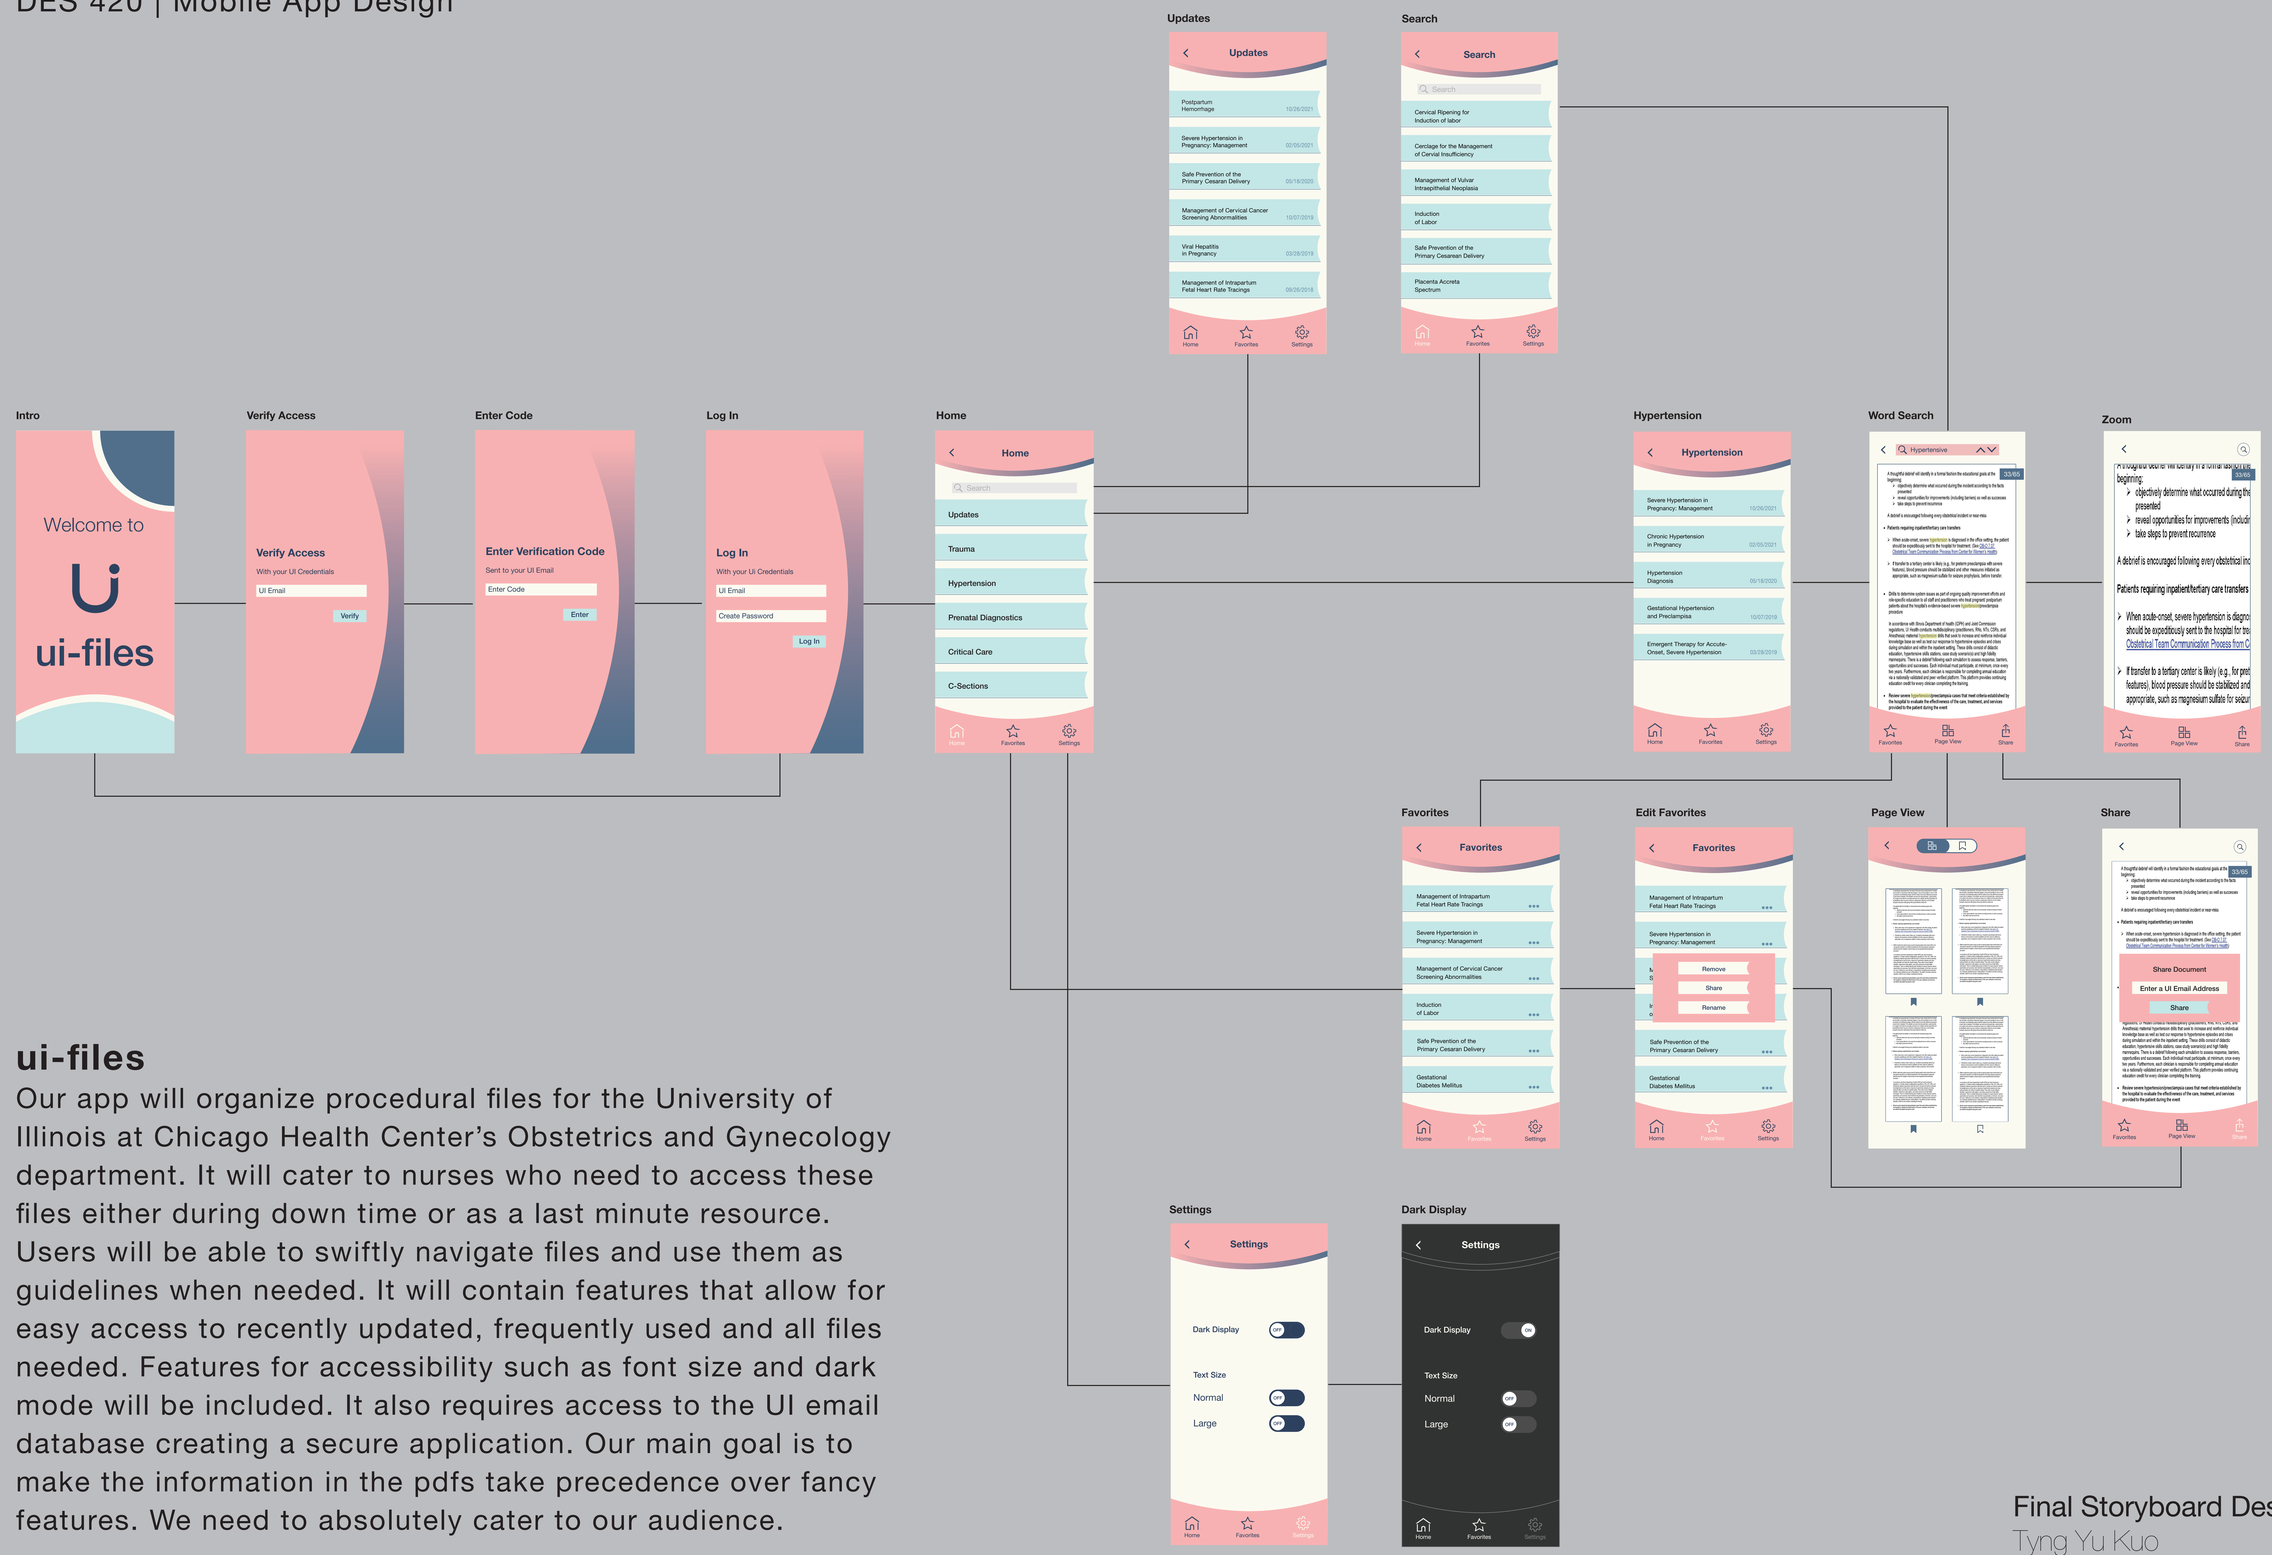
UI Health Clinical Care Guidelines App

DES 420 | Mobile App Design



ui-files

Our app will organize procedural files for the University of Illinois at Chicago Health Center's Obstetrics and Gynecology department. It will cater to nurses who need to access these files either during down time or as a last minute resource. Users will be able to swiftly navigate files and use them as guidelines when needed. It will contain features that allow for easy access to recently updated, frequently used and all files needed. Features for accessibility such as font size and dark mode will be included. It also requires access to the UI email database creating a secure application. Our main goal is to make the information in the pdfs take precedence over fancy features. We need to absolutely cater to our audience.
